ABSTRACT
Ayurveda has since long time provided answer to the problems arising due to lifestyle disorders. Rheumatoid arthritis is a disorder with varied clinical signs and symptoms related to multiple organ systems, being both articular and extra-articular. On the basis of clinical presentation, it is close to Amavata, a disease described in newer Ayurvedic texts. Non-steroidal anti-inflammatory drugs (NSAIDs) are the mainstay of treatment in this condition; however, they have limitations for a long term therapy. Hence, there is a need for drugs having good efficacy with low toxicity profile in this debilitating disorder. The whole treatment includes Deepana, Pachana. Drugs and combinations like Shunthi Kwatha with Eranda Taila for Deepana Pachana and Ashwagandha churna, as Balya and Rasayana after completion of treatment were also incorporated in the schedule. Thus the case described in this article was treated with the same guideline of Amavata Chikitsa in Ayurveda and results were obtained. Though a single case is not enough to prove the efficacy, author has tried to share his experience through this article to state that Ayurvedic treatment for Rheumatoid Arthritis is very effective and enhances the quality of life of patient without creating any side effects. More deeper study in this regards is required.

Keywords: Amavata, Ayurveda, Rheumatoid Arthritis, Shaman chikitsa.

INTRODUCTION
Rheumatoid arthritis is now-a-days a commonest disorder occurring due to changes in the lifestyle. On the basis of sign and symptoms, it can be correlated with Amavata described in Ayurveda. Amavata is one of the commonest disorders caused by the impairment of agni, formation of ama and vitiation of vata[1]. As in Ayurveda, treatment is aimed towards complete cure from disease leading to reversal to healthy state and not merely the absence of symptoms, it has best answers to many diseases where modern medical science fails to give results. Amavata can be a best example. Ayurvedic treatment of Amavata leads to break in pathogenesis of the disease and hence provides complete cure. The treatment is safer, cost effective and traditionally proven. The case described in this article cannot prove it concretely as there’s no large data, but it can be helpful to show path towards the Ayurvedic management of Rheumatoid Arthritis.

CASE REPORT
A male patient of age 39 presented with pain and swelling over wrist, metacarpophalyngeal and interphalangeal joints of right side. There was mild stiffness and tenderness in joints. He also had minor complaints like anorexia, nausea, constipation, heaviness in body etc. 

General Physical Examination
B.P. = 122/78 mmHg, P/R = 78/min, Pallor absent, Icterus absent, Cyanosis absent. Clubbing absent.
CVS: S1 S2 Normal
Chest: B/L equal air entry with no added sound
CNS: Patient conscious, well oriented to time, place, person.

Methods for determining objective parameters

Grip power and pressing power: The functional status of wrist joints, metacarpophalangeal joints and interphalangeal joints was assessed by measuring of pressing power and grip power. For this test (Grip power), patients were asked to grip the inflated cuff of a sphygmomanometer by both palms and fingers separately and the rise of manometer readings was recorded in mmHg of mercury at the time of registration and follow ups of the patients of Amavata. For measuring the pressing power the cuff of
sphygmomanometer was inflated at the basal value and was placed on the table. The patient sitting on front of the table on a chair was told to press the inflated cuff by both hands separately. While pressing the cuff pressure should be applied from all the involved joints of upper limbs and the extent to which the patient can press the cuff is observed in terms of the rise in mercury column in mm of Hg at the time of registration and follow ups. In both the test the cuff of sphygmomanometer was inflated up to basal value of 30 mm of Hg. Grading was done.

**Grading for assessment of disease**

<table>
<thead>
<tr>
<th>Pain</th>
<th>Stiffness</th>
</tr>
</thead>
<tbody>
<tr>
<td>0 No pain</td>
<td>0 No stiffness</td>
</tr>
<tr>
<td>1 Pain complaints but tolerable</td>
<td>1 20% limitation of normal range of mobility</td>
</tr>
<tr>
<td>2 Intolerable pain and taking analgesic once a day</td>
<td>2 50% limitation of mobility</td>
</tr>
<tr>
<td>3 Intolerable pain and taking analgesics two times a day</td>
<td>3 75% or more reduction of normal range of movement</td>
</tr>
<tr>
<td>4 Intolerable pain and taking analgesics more than two times in a day</td>
<td></td>
</tr>
</tbody>
</table>

**Swelling**

| No swelling | Feeling of swelling + Heaviness | Apparent swelling | Huge (Synovial effusion) swelling |

**Grip power and pressing power**

| 0 = 200 mmHg | 1=198 – 120 mmHg | 2=118 – 70 mmHg | 3 =<70 mmHg |

**Laboratory findings**

Hb: 11.2 gm%; TLC:11,540/cumm; ESR:14 at the end of first hour, RA factor: positive.

**Diagnosis**

On the basis of the 1987 revised criteria by American College of Rheumatology for diagnosis of rheumatoid arthritis[2], diagnosis of Rheumatoid Arthritis was made.

**Clinical Examination**

**DISCUSSION**

Ama and vata are the important components in the pathogenesis of Amavata. As no disease occurs without impairment of agni[5], the important issue in chikitsa is deepana and Amapachana.

**Deepana Pachana: **As described in Amavata Chikitsa Sutra[6], at the start of the therapy, Deepana Pachana was done using Eranda Taila and Shunti Kwatha[7]. Eranda Taila is described to be best for the treatment of Amavata[8]. It is Katu, Ushna and Vataghna[9] Due to its Sukshma Gun, it reaches Sandhi and breaks Doshasanghata. Shunti is Deepana, Vibhandharah[10]. Also due to its Pachana action, it helps in Aamapachana. Thus is helpful in Samprapti Vighatana.

**Simhanada Guggulu**: As a whole the qualities of drugs in Simhanada Guggulu can be considered as laghu, ruksha, ushna, tikhna[11]. Majority of the drugs are having vata-kaphashamak action. Owing to this property, antagonism to kapha and ama it brings significant improvement in sign and symptom of disease.

**Apunarbhava and Balya Chikitsa**: The disease was chronic one. The diseased state of patient leads to weakness of body and mind. Also,
due to prolonged Agnimandya and Ama, Poshana gets disturbed. Thus to counteract all these problems and gain the patients bala, he was given Balya Chikitsa. As patient gains bala and the drugs are Rasayana, there is no chance of recurrence, hence it is called as Apunarbhava Chikitsa. The drug used is Balya, Bringhana and Rasayana\[12\].

CONCLUSION

From this case study, it can be concluded that Rheumatoid Arthritis can be taken parallel to Amavata. Ayurveda can provide a solution to the daily increasing concern about this disease. When treated with Ayurvedic treatment schedule as described in Ayurveda according to the condition of patient and state of the disease, we can get best results for treating many other diseases like this.
